

CORRELATION OF MAP UNITS

DESCRIPTION OF MAP UNITS

Base is near orthophoto from LANDSAT-1 image fitted by inspection to graticule of controlled mosaics prepared by Aero Service Corp. (1961 and 1966). Inasmuch as mosaics on the north and east were controlled to a datum different from the datum used to control mosaics on the south and west, and the fact the two datums are not reconcilable, makes it impossible to determine the exact scale or true north. However, a best match for detail for the Wadi Sadiyiah quadrangle (sheet 20/40 A) on the west may be obtained by fitting corners to points A and B; for the Jabal Afaf quadrangle (sheet 20/40 D) on the south points B and C; for sheet 21/41 D on the north points X and Y; and for the Shuqub quadrangle (sheet 20/41 A) on the east points Y and Z. The base image is oversized so as to include corner ticks of adjoining quadrangle, from which lat and long values were derived.

RECONNAISSANCE GEOLOGY OF THE WADI SALIBAH QUADRANGLE, SHEET 20/40B, KINGDOM OF SAUDI ARABIA
